Wenbo Zhang

PhD Student · Informatics

E343, Westgate Building, Pennsylvania State University (University Park), State College, PA, 16802

+1 814-852-9399 | wjz5120@psu.edu | https://wenbozhangjs.github.io/

Research Interests

NLP for Social Good, AI for Social Good, Natural Language Processing, Computational Game Theory, Speech Processing.

Education

Pennsylvania State University (PSU) *Pennsylvania, USA*

Doctor of Philosophy in Informatics (GPA: 4.0/4.0) *Aug. 2021 - Present*

- Advisor: Dr. Amulya Yadav

University of Southern California (USC) *California, USA*

Master of Science in Electrical Engineering *Aug. 2016 - May. 2018*

- Advisor: Dr. Cauligi Raghavendra
- Research: Machine learning for phenotypic pattern identification of adolescents with drug usage

University of Electronic Science and Technology of China (UESTC) *Sichuan, China*

Bachelor of Engineering in Renewable Energy Materials and Devices *Sept. 2011 – Jul. 2015*

Publications

[1] **Wenbo, Zhang**, Hangzhi Guo, Prerna Ranganathan, Jay Patel, Sathyanath Rajasekharan, Nidhi Danayak, Manan Gupta, Amulya Yadav. A Continual Pre-training Approach to Tele-Triaging Pregnant Women in Kenya. In the Thirty-Seventh AAAI Conference on Artificial Intelligence (AAAI), February 2023. (**System has been Full-time deployed by Jacaranda Health**)

Research Experience

A tele-triage framework to lower the risk of maternal and neonatal death in Kenya *Pennsylvania, USA*

Advisor: Dr. Amulya Yadav *Sept. 2021 - Jun. 2022*

- This work focuses on developing an NLP framework, using multi-lingual pretraining and continual pretraining, to predict the user's medical emergency level based on code-mixed SMS messages.
- This framework has been deployed inside the PROMPTS (system developed by Jacaranda Health). According to the feedback from the collaborator, this framework reduces the monthly system management cost by 22.8% and PROMPTS helpdesk's workload by ∼12%.

Machine learning for phenotypic pattern identification of adolescents with drug usage *California, USA*

Advisors: Dr. Cauligi Raghavendra *Feb. 2018 - Jul. 2018*

- This research focuses on identifying potential students (in high school) who may use alcohol, cigarette or marijuana in the future. We analyze potential patterns which may lead such behaviors through machine learning perspective.

Awards, Fellowships, & Grants

2014 **3rd Class of National People's Scholarship (top 15%)**, UESTC

2013 **3rd Class of National People's Scholarship (top 15%)**, UESTC

2012 **3rd Class of National People's Scholarship (top 15%)**, UESTC

Teaching Experience

Spring 2022 **DS 442 Artificial Intelligence**, Teaching Assistant at Pennsylvania State University

Industrial Experience

Algorithm Engineer *Beijing, China*

Kingsoft AI Lab *Jan. 2019 - Jul. 2021*

- Applied NLP techniques to design modules inside knowledge graph.
- Employed deep neural network and speech processing techniques to construct the speech synthesis system.

Direction 1: knowledge graph

Open domain knowledge graph construction *Beijing, China*

Project Participant *Jan. 2021 - Jul. 2021*

- Designed modules (name entity recognition and relation extraction) for Chinese knowledge graph construction.
- The knowledge graph has been deployed inside the Kingsoft electronic notebook website.

Direction 2: speech processing (especially speech synthesis)

English multi-speaker speech synthesis system for novel website *Beijing, China*

Project Leader *Jul. 2020 - Dec. 2020*

- Developed a system which generated speech with someone's tone through few minutes' voice recordings.
- Created a prototype for audiobook reading on English novel translation website to support multiple human voices.

End-to-end framework for Chinese polyphone pronunciation prediction *Beijing, China*

Project Leader *Apr. 2020 - Jul. 2020*

- Built end-to-end framework for pronunciation prediction of Chinese polyphone with multi-phonemic values.
- Improved the pronunciation correctness of Chinese speech synthesis system.

NLP based Chinese text prosody prediction *Beijing, China*

Project Leader *Jan. 2020 - Mar. 2020*

- Modeled the prosody (short pronunciation break among Chinese words) prediction as the sequence tagging problem.
- Improved the naturalness and quality of the synthesized speech generated from Chinese speech synthesis system.

End-to-end Chinese speech synthesis system *Beijing, China*

Project Leader *Jan. 2019 - Apr. 2020*

- Implemented end-to-end Chinese speech synthesis system, including the text processing module(which extracts semantic information from input sentences), acoustic model (which predicts acoustic features based on semantic information), and the vocoder model (which transforms acoustic features into speech signals).
- Applied on the Kingsoft policy question answer (QA) system.

Past Internship and Research Visit

Comprehend Information Technology Co., Ltd. *Suzhou, China*

Mentor: Dr. Hengchang Liu *Jun. 2017 - Aug. 2017*

- NLP-based data mining on the traffic data (electronic checkpoints data) accessed from Suzhou City Brain.

Skills

DevOps	Google Cloud Platform, Alibaba cloud, Docker
Back-end	Django
Programming	Python, R, C, LaTeX, Shell
Framework	Tensorflow, Pytorch
